Solutions Climat

In 2014, 87% of recorded natural disasters were climate-related in 2014, and 211 million people were affected, which is five times higher than the number of conflict victims.

Natural disasters and climate change have significant impacts on the most vulnerable populations and ecosystems around the world. Climate change will escalate these disparities and increase the number of people displaced by climate. But various multisectorial solutions exist and are implemented at ground level to reduce the impact of disasters

Let's share our experiences to disseminate good practices and lessons learned !
